

Disposable nitrile Diamond glove

CE 2777
Cat III

These black nitrile diamond-textured gloves are far superior in every way to standard disposable nitrile gloves: The elasticity, resistance to perforation and to tearing are greater than conventional gloves and they last considerably longer. Despite weighing 8 g, these gloves offer high touch sensitivity. The diamond texture gives the gloves excellent grip in wet, dry or oily conditions.

These diamond-textured nitrile gloves are recommended for use in any application where sensitivity to touch is important: lightweight assembly, car maintenance, agriculture, cleaning, food industry or processing, sanitary etc. These gloves comply fully with norms governing exposure to chemical agents and microorganisms.
