

Aluminium Ferrule Crimping Tool

The DIN 3093 aluminum ferrule Crimping Tool is a tool designed to accurately and safely crimp DIN 3093 aluminum ferrules which are used to make ferrules and permanent fasteners for steel wire rope. It has 2 regulators that provide optimum calibration of the force to be applied according to the application being performed.

It is a precise tool, where the final crimping is perfectly integrated with the cable, achieving not only a safe and robust application but also an interesting aesthetics. Its ergonomic design facilitates comfort in each application and it is not necessary to use a high degree of force. It's an indispensable tool for the professional who wants efficient, safe and clean applications.

MATERIAL: Acero 60Si2Mn
