

The SCL Tubular Clip is one of a sub-group of fasteners which are used in conjunction with rivets. They can be compared to self-locking nuts for blind assemblies and are used where other fasteners cannot be applied. There are two varieties of SCL:

**Self-Locking:** The tubular clip is inserted into the corresponding hole in the panel. A rivet is then inserted which causes the clip to open, fixing it into the panel.

**Removable:** the top of the clip flares out exerting pressure on the rivet.

**MATERIAL:** Spring steel  
CK67S (DIN 10132-4)  
**FINISH:** Blued  
**HARDNESS:** HV 425 ÷ 495 / HRC 43 ÷ 49
