

Manual machine

Flat shape

This blade is specially designed for cutting all types of metals (including stainless steel). Its abrasive load ensures a much easier and faster cut, while also achieving a better finish.

MATERIAL: Aluminum oxide grain (Corundum) on a synthetic resin support reinforced with fiberglass nets.

Specification A 46 RBF.
Metallic central ring.

USES: It should be used at angles of approximately 90° with respect to the surface to be cut to achieve its best performance and capacity.
Suitable for cutting stainless steel.
Peripheral speed: 80 m / s.
