

# Wire rope clip U.S. type

The malleable structure of the wire rope clip is intended to make wire rope eyes or connections between wires where the wires cannot be crimped, or where temporary wire ends or links cannot be used.

The grooves on the inner side of the base ensures a better grip on the wire. TIPS: Wire rope clips must be retightened after the wire has been pulled the first time. The body of the wire rope clip must be assembled on the active part. The spacing between wire rope clips must be 6 mm x the wire diameter.

**MATERIAL:** Body - Malleable steel  
Fork - Steel c15

**FINISH:** Galvanized
