

The use of lifting eye bolts is especially recommended when the load to be lifted or lashed has a perfectly flat surface.

The lifting eye bolt screws into the article to be lifted using the threaded bolt which is part of the article, thereby guaranteeing a perfect joint between both parts and ensuring that the unit can be lifted or lashed safely.

INSTRUCTIONS: In order not to compromise safety, the SWL working load of each metric bolt should never be exceeded.

MATERIAL: Steel C15
FINISH: Zinc plated
