

DIN 5299 snap hook with safety latch

The DIN 5299 with a safety latch offers the advantage that the safety latch between the hinge and the body of the DIN 5299 hinders it being opened due to carelessness, friction or error.

The inner thread of the safety latch ensures maximum grip and the outer grooves of the latch facilitates manual threading.

TIPS: In order not to compromise safety, the SWL established for each size must never be exceeded. The quality of the finish guarantees a very good corrosion resistance. Industrial use, wire and chain attachment (No PPE).

MATERIAL: Steel C15
FINISH: Zinc plated

Size d x L	Denomination	Part Number	L	d	D	C	2R	Workload W.L.L (kg)	Box Quantity	Outer Box Qty.
