

Part Number: 09226130

CRIMPING TOOL

for aluminium ferrules

CRIMPING CORRECT POSITION

Through the cavity of the aluminium ferrule, insert the two cable ends to be crimped. Then, depending on the size of the ferrule, insert the assembly into the appropriate crimp hole. This will ensure that the crimp is optimal and will prevent the cables from slipping. **Select the crimping hole that is most appropriate for the size of the ferrule.**

It has two adjustment buttons. These allow the force to be optimally calibrated according to the use of the tool.

UNIQ ALUMINIUM FERRULES

DIN 3093

PART NUMBER	WIRE ROPE Ø (mm)	BOX QUANTITY	OUTER BOX QUANTITY
